Visual Studio Code interface showing a C++ program for image processing. The program reads an image, converts it to binary, and finds contours. The right sidebar shows the project structure.

```

1 #include <opencv2/opencv.hpp>
2
3 using namespace cv;
4
5 int main() {
6     // 이미지 불러오기
7     Mat image = imread("C:/Users/Chan's Victus/Documents/class/Project/image/keyboard.bmp", IM
8
9     if (image.empty()) {
10         std::cerr << "이미지를 읽을 수 없습니다." << std::endl;
11         return -1;
12     }
13
14     // 이미지 이진화
15     Mat binaryImage;
16     threshold(image, binaryImage, 128, 255, THRESH_BINARY);
17
18     // 레이블링
19     Mat labeledImage, stats, centroids;
20     int nLabels = connectedComponentsWithStats(binaryImage, labeledImage, stats, centroids);
21
22     // 원본 이미지에 컨투어 그리기
23     Mat contourImage = image.clone();
24     std::vector<std::vector<Point>>> contours;
25     findContours(binaryImage, contours, RETR_EXTERNAL, CHAIN_APPROX_SIMPLE);
26
27     for (const auto& contour : contours) {
28         Rect rect = boundingRect(contour);
29         rectangle(contourImage, rect, Scalar(255, 0, 0), 2);
30     }
31
32     // 결과 표시
33     imshow("Origin", image);
34
35     namedWindow("Contours", WINDOW_NORMAL);
36     imshow("Contours", contourImage);
37
38     waitKey(0);
39
40     return 0;
41 }
42
43

```
