The image shows a Visual Studio IDE window with a C++ project named 'Project'. The code in the main.cpp file is as follows:

```
1 #include <opencv2/opencv.hpp>
2 using namespace cv;
3 using namespace std;
4 // 문자열 출력 함수 - 그림자 효과
5 void put_string(Mat& frame, string text, Point pt, int value)
6 {
7     text += to_string(value);
8     Point shade = pt + Point(2, 2);
9     int font = FONT_HERSHEY_SIMPLEX;
10    putText(frame, text, shade, font, 0.7, Scalar(0, 0, 0), 2); // 그림자 효과
11    putText(frame, text, pt, font, 0.7, Scalar(120, 200, 90), 2); // 작성 문자
12 }
13
14 int main()
15 {
16     VideoCapture capture(0); //0번 카메라 연결, 비디오 캡처 객체 선언 및 연결
17     if (!capture.isOpened()) //비디오 파일 예외 처리
18     {
19         cout << "카메라가 연결되지 않았습니다." << endl;
20         exit(1);
21     } //카메라 속성 획득 및 출력
22
23     cout << "너비" << capture.get(CAP_PROP_FRAME_WIDTH) << endl;
24     cout << "높이" << capture.get(CAP_PROP_FRAME_HEIGHT) << endl;
25     cout << "노출" << capture.get(CAP_PROP_EXPOSURE) << endl;
26     cout << "밝기" << capture.get(CAP_PROP_BRIGHTNESS) << endl;
27
28     for (;;) { //무한 반복
29         Mat frame;
30         capture.read(frame); //카메라 영상 받기
31
32         put_string(frame, "EXPOS: ", Point(10, 40), capture.get(CAP_PROP_EXPOSURE));
33         imshow("카메라 영상보기", frame);
34         if (waitKey(30) >= 0) break; // 30ms 지연
35     }
36 }
37
```

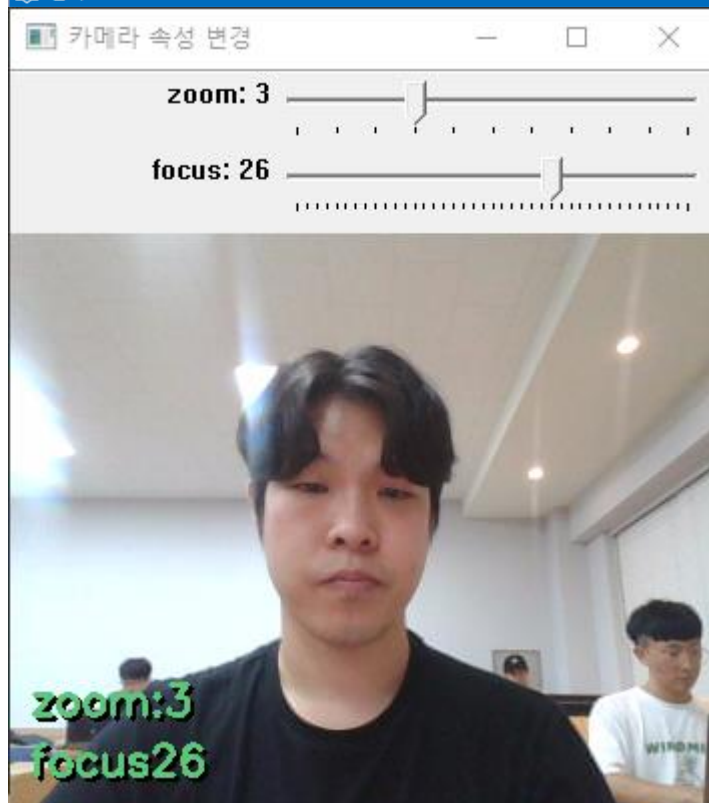

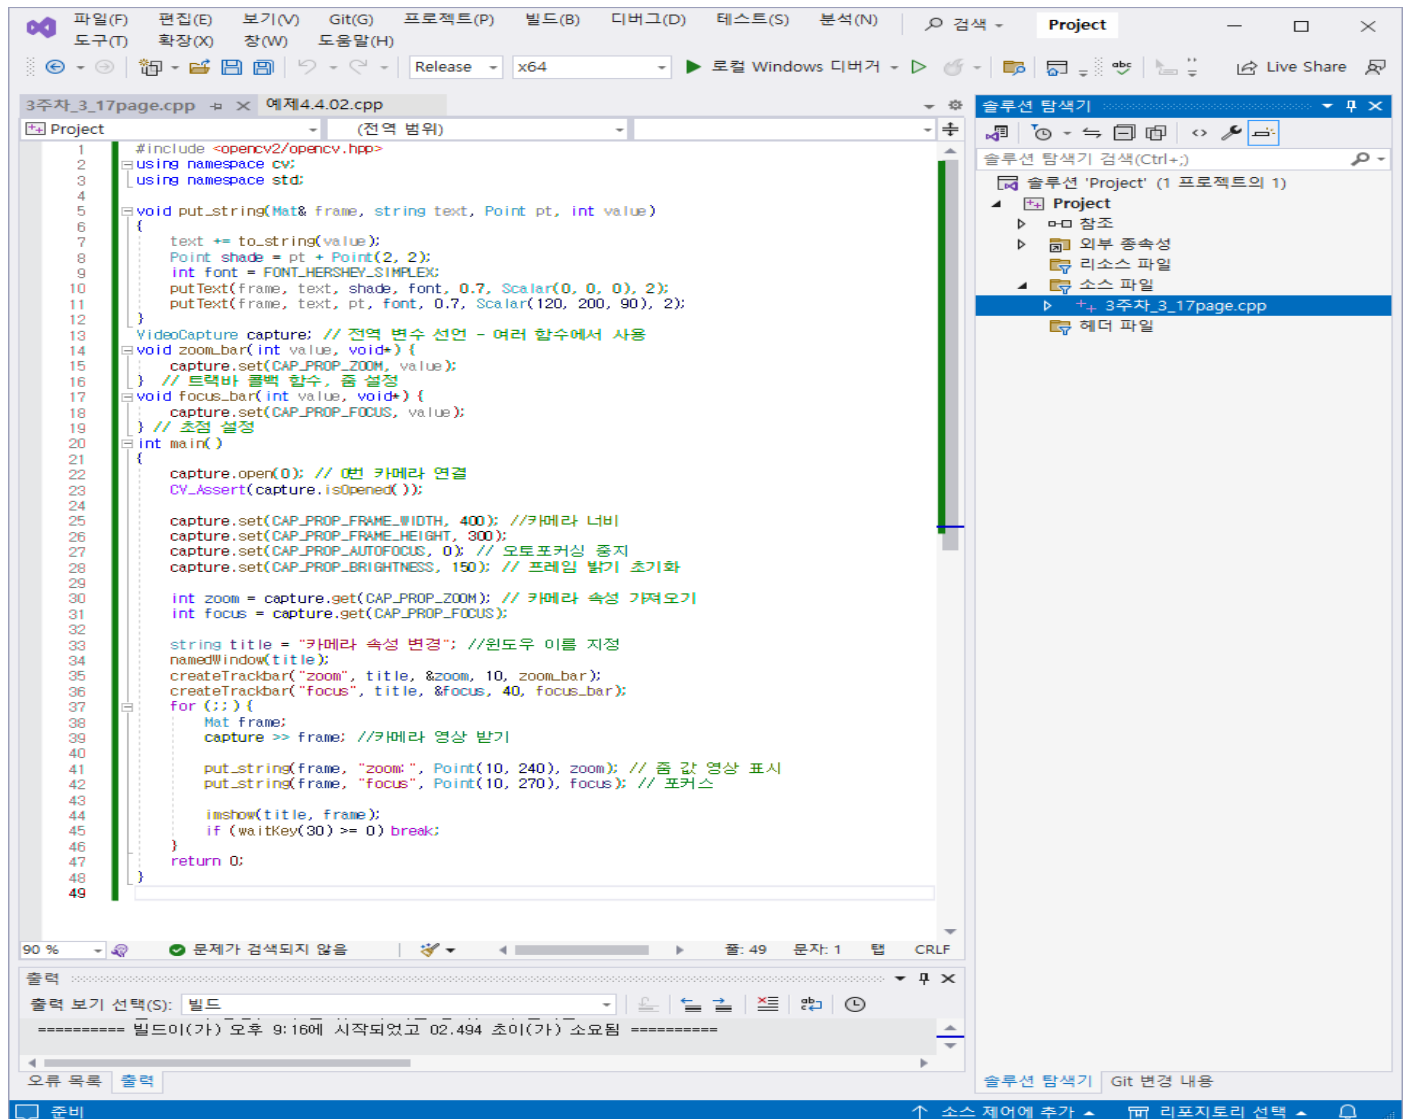

The terminal window shows the following output:

```
1> 0 functions had inline decision re-evaluated but remain unchanged
1> 코드를 생성했습니다.
1> Project.vcxproj -> C:\Users\Chan's Victus\Documents\class\Project\Release\Project.exe
1> "Project.vcxproj" 프로젝트를 빌드했습니다.
===== 빌드: 1개 성공, 0개 실패, 0개 최신 상태, 0개 건너뛴 =====
===== 빌드이(가) 오후 9:01에 시작되었고 02.345 초이(가) 소요됨 =====
```

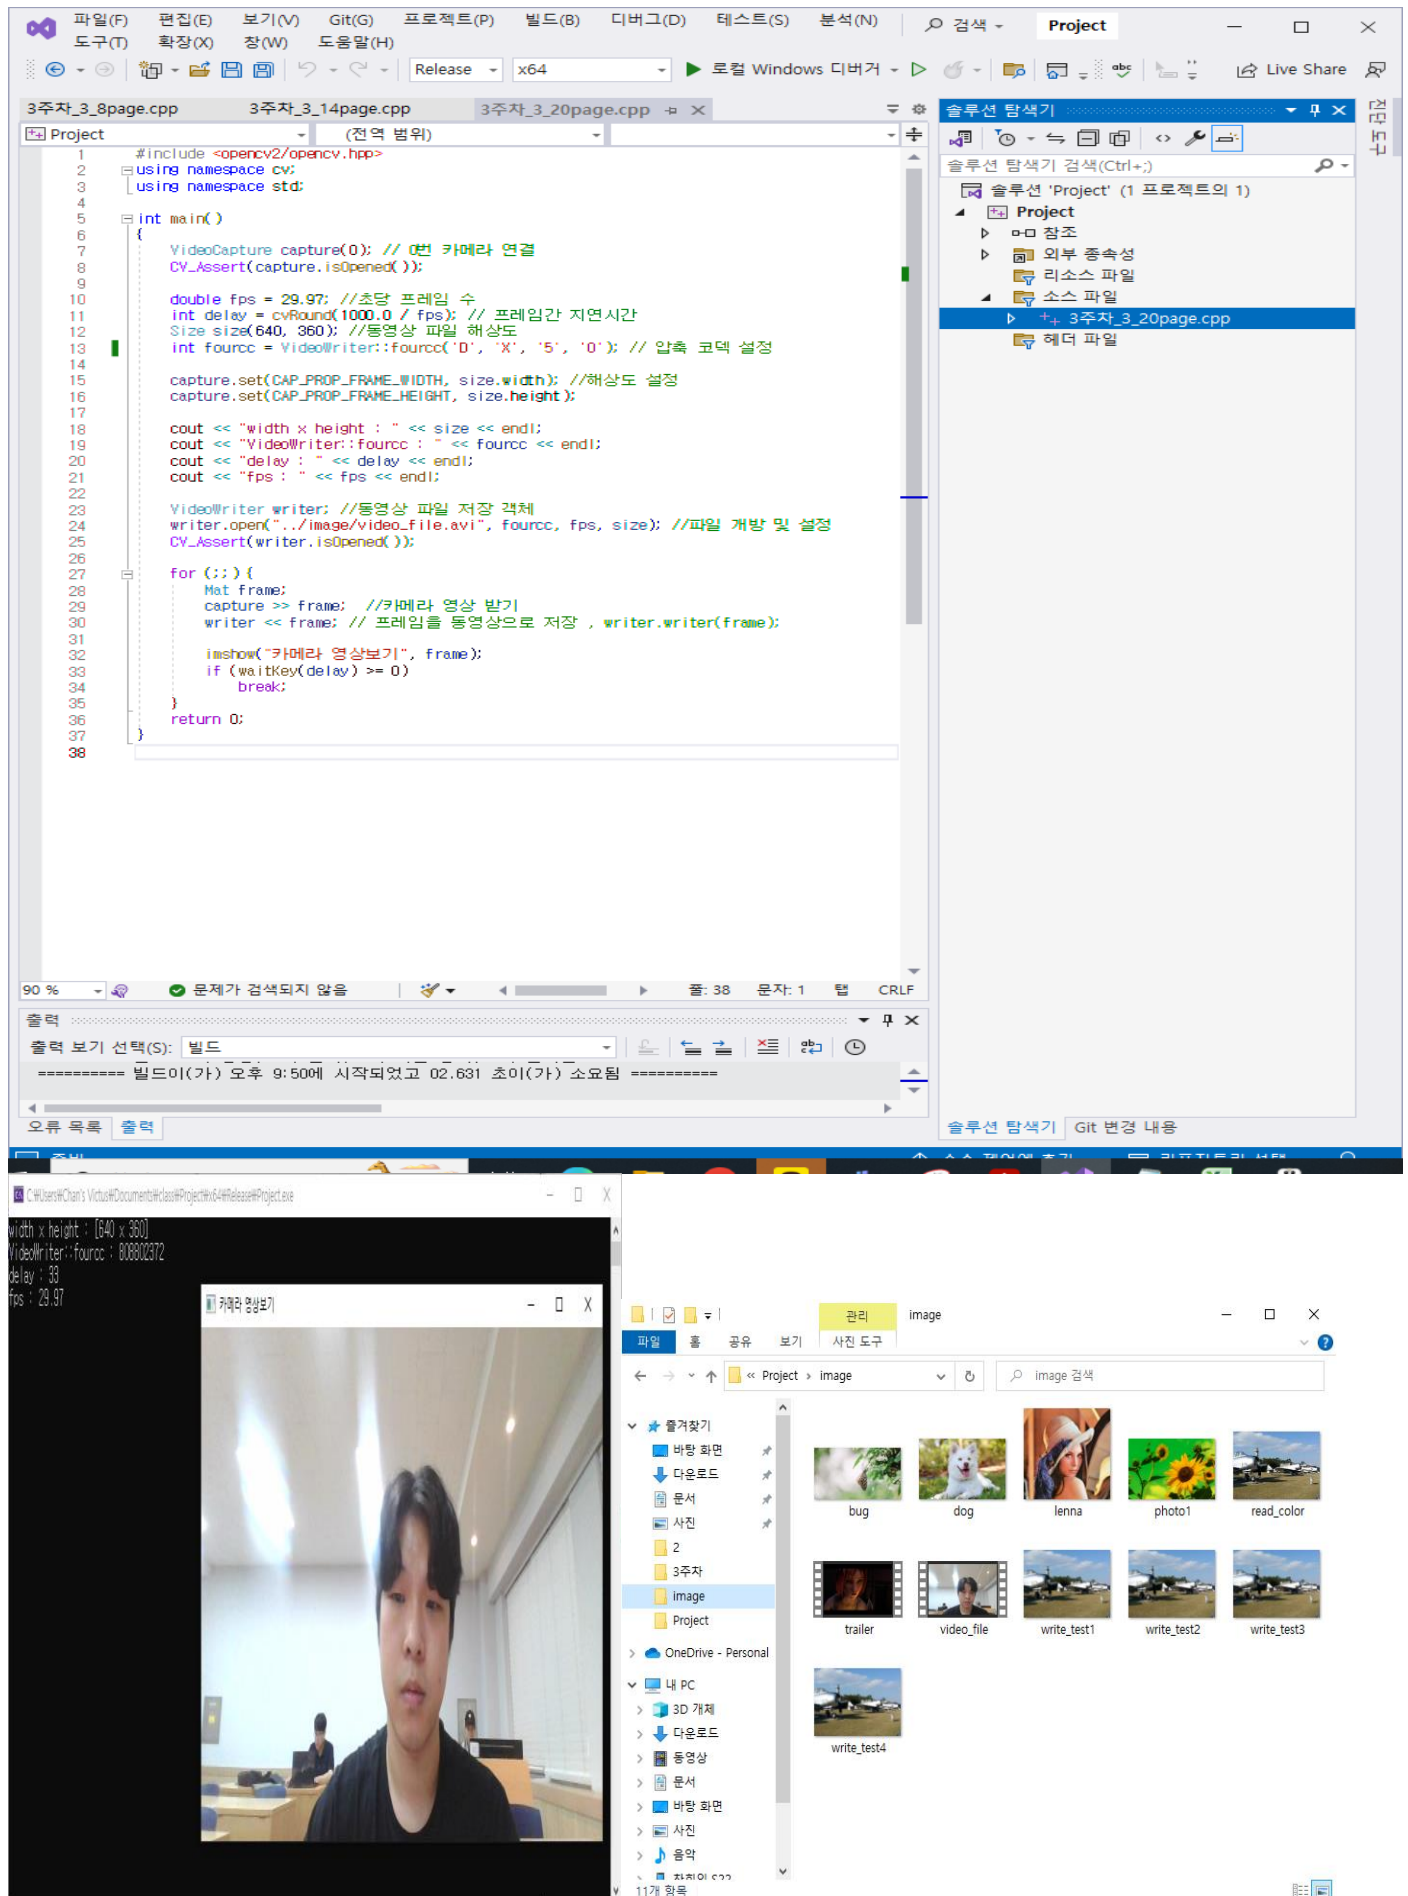

The camera window displays a video feed of a person in a classroom setting. The text 'EXPOS: -6' is overlaid on the video in green. On the left side of the terminal window, the following text is displayed:

```
너비 640
높이 480
노출 -6
밝기 128
```

The image shows a Visual Studio IDE with a C++ project named '3주차_4_6page.cpp'. The code defines a float array 'data' and creates several OpenCV Matrices (m1, m2, m3, m4, m5, m6) using different constructors and methods. The program prints the dimensions and data of each matrix.

```

1 #include <opencv2/opencv.hpp>
2 using namespace cv;
3 using namespace std;
4
5 int main()
6 {
7     float data[] = {
8         1.2f, 2.3f, 3.2f,
9         4.5f, 5.5f, 6.5f,
10    };
11    //Mat 객체 선언 방법
12    Mat m1(2, 3, CV_8U);
13    Mat m2(2, 3, CV_8U, Scalar(300)); //uchar형 -> 255로 저장
14    Mat m3(2, 3, CV_16S, Scalar(300)); //uchar형 -> 300로 저장
15    Mat m4(2, 3, CV_32F, data); //배열 원소로 초기화
16
17    //Size_ 객체로 Mat 객체 선언방법
18    Size sz(2, 3);
19    Mat m5(Size(2, 3), CV_64F);
20    Mat m6(sz, CV_32F, data); //Size_ 객체로 초기화
21    cout << "[m1] =" << endl << m1 << endl;
22    cout << "[m2] =" << endl << m2 << endl;
23    cout << "[m3] =" << endl << m3 << endl;
24    cout << "[m4] =" << endl << m4 << endl;
25    cout << "[m5] =" << endl << m5 << endl;
26    cout << "[m6] =" << endl << m6 << endl;
27    return 0;
28 }
29

```

The terminal window shows the output of the program:

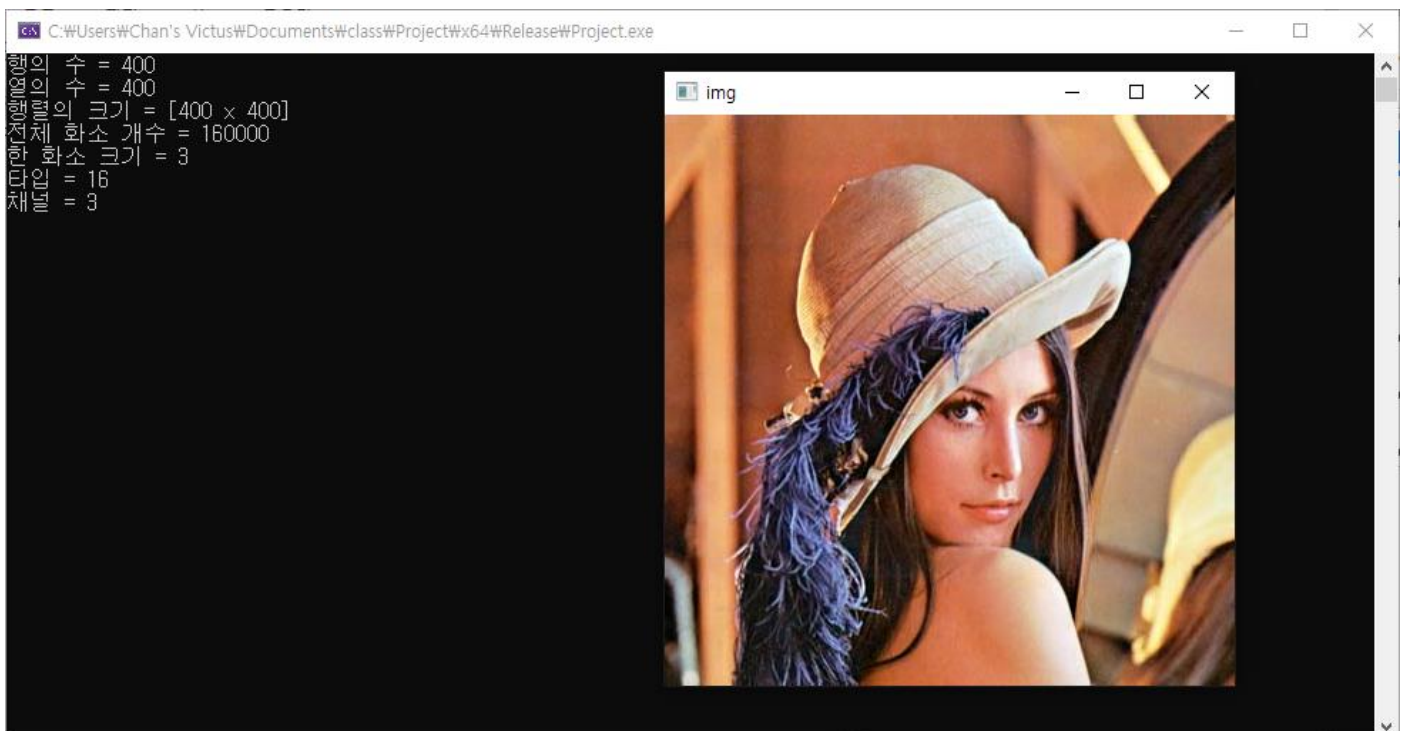

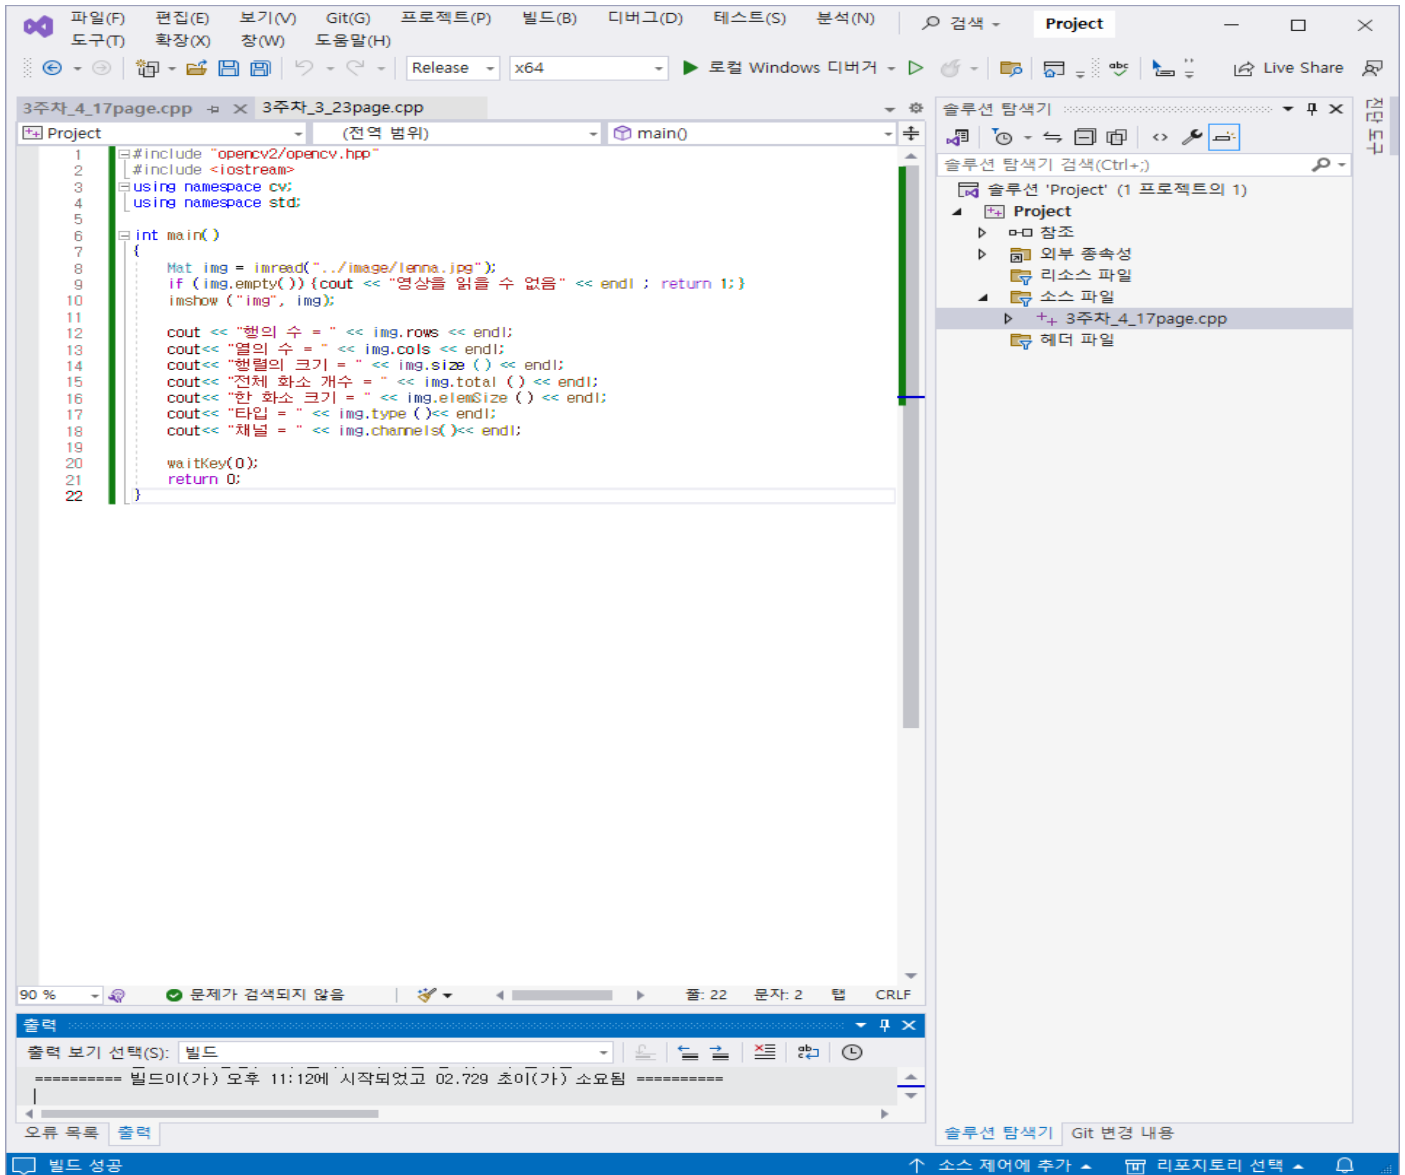

```

[m1] =
[ 0,  0,  0;
  0,  0,  0]
[m2] =
[255, 255, 255;
 255, 255, 255]
[m3] =
[300, 300, 300;
 300, 300, 300]
[m4] =
[1.2, 2.3, 3.2;
 4.5, 5.5, 6.5]
[m5] =
[0, 0;
 0, 0;
 0, 0]
[m6] =
[1.2, 2.3;
 3.2, 4.5;
 5.5, 6.5]

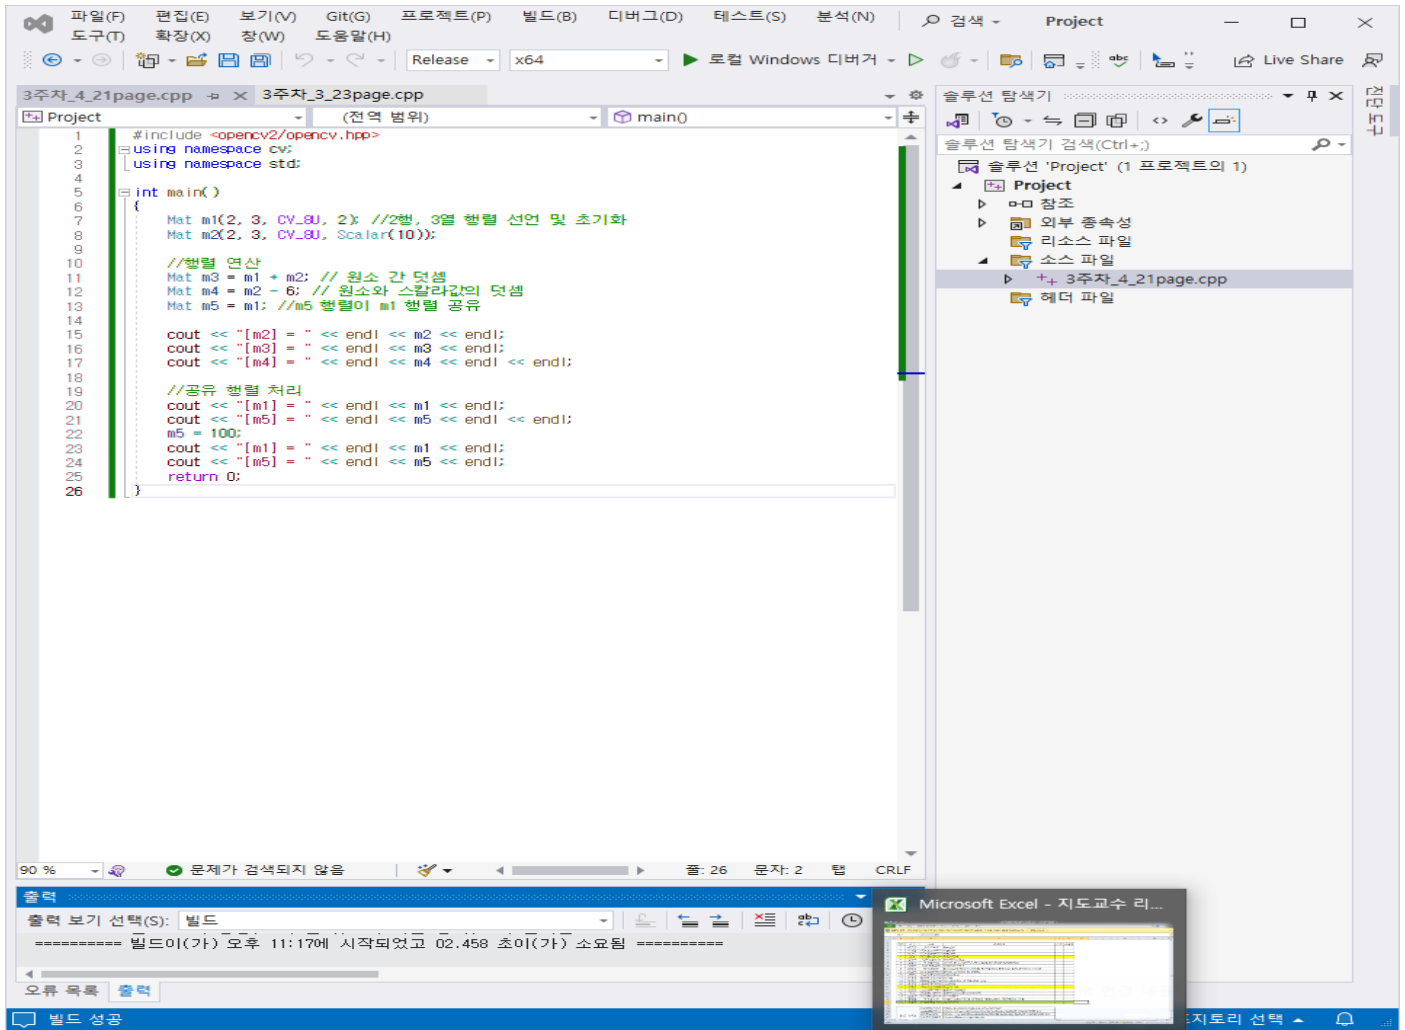

```

The terminal also shows the process ID 1044 and the message: "C:\Users\Chan's Victus\Documents\class\Project\x64\Release\Project.exe(프로세스 1044개)이(가) 종료되었습니다(코드 : 0개).이 창을 닫으려면 아무 키나 누르세요..."
